PROFESSIONAL SUMMARY

Full stack developer with 4+ years of experience in TypeScript, React, Next.js, Node.js and PostgreSQL. Currently own identity, access control and candidate search for a four-product dealer SaaS platform serving 1,000+ dealerships: mobile-OTP login, cross-product SSO, role-based permissions, Typesense search over 300K+ profiles and human-reviewed LLM features. Previously owned the React layer for two client platforms and mentored two junior developers.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Jun 2025 – Present

Autoverse AI, Ahmedabad, India

- Own identity, access control and candidate search across a four-product dealer SaaS platform serving 1,000+ dealerships, 88 automotive brands and 300K+ candidate profiles in 28 states and union territories.
- Replaced three incompatible login systems (passwords, Keycloak and per-product OTP) with a single mobile-OTP identity layer, with per-code attempt limits and lockout after repeated failed sign-ins.
- Fixed an intermittent cross-product SSO failure: a meta refresh raced a `location.assign()` call and replayed single-use handoff codes. Found it in 4,000+ production auth codes over 30 days (up to 48% unused on one portal).
- Built candidate search on Typesense over 300K+ profiles, with seniority-aware role hierarchies across 5 job families, city and role synonyms and tuned typo tolerance, so a Sales Executive search excludes candidates already promoted past that level.
- Designed a 7-role RBAC and entitlement system with dealer-namespaced permissions. A server-side check intersects dealer grants with user grants and fails closed; the same rules drive a guard in the UI.
- Built a change-data-capture pipeline that keeps the search index within 60 seconds of PostgreSQL: row-level triggers enqueue reindex jobs, and per-minute cron workers drain separate candidate and job queues.
- Integrated LLMs (Gemini and gpt-oss-120b) into a 6-stage recruitment pipeline for job description generation and resume extraction. Every AI output requires human approval before it reaches a candidate.
- Designed an LLM-assisted candidate matching pipeline on Gemini: batch match scoring at low temperature for consistent rankings, rate-limited to 20 requests per minute and restricted to HR, admin and interviewer roles.
- Built credit billing that charges a dealer only when a paid external lookup returns contact details, never for in-house profiles or failed lookups, with per-search cost estimates to track daily spend.
- Run 34 scheduled jobs on Vercel Cron, including per-minute WhatsApp, email and social-post queue workers and 9 staggered analytics cache-warming jobs.

Software Engineer | Sep 2023 – May 2025

N2N Solutions, Pune, India

- Owned the React application layer for 2 production client platforms, from component architecture through release.
- Integrated REST APIs into typed, cache-aware data layers with explicit loading and error states, and led refactoring and optimization passes across the React codebase.
- Mentored 2 junior React developers through code review and pairing, and set shared standards for component design, state management and Git workflow.
- Worked with QA to define test strategy and coverage priorities before releases, reducing the defects that reached production.

Junior React Developer | May 2022 – Sep 2023

Excellent Web World, Ahmedabad, India

- Built React frontends for 2 products in an 8–9 person cross-functional team: a Hong Kong logistics and warehousing platform and a salon booking application.
- Built Node.js services behind the salon product's admin portal and its companion React Native app, beyond the original frontend scope.
- Delivered the customer-facing app and the internal operations portal for the logistics platform, with responsive, cross-browser layouts and REST API integration.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2022+), SQL, HTML5, CSS3
Frontend	React 19, Next.js 16 (App Router, Server Components, Server Actions), Redux Toolkit, TanStack Query / Table / Virtual, React Hook Form, Zod, Tailwind CSS, Radix UI, Material UI, React Native
Backend	Node.js, NestJS, Express.js, REST API design, microservices, background workers, cron scheduling, queue processing, caching, Apache Kafka
Databases & Search	PostgreSQL, Supabase, MySQL, MongoDB, Prisma, row-level security, database triggers, materialized views, indexing and query optimization, Typesense, Elasticsearch
Security & Identity	SSO, OAuth2 / OIDC, JWT, OTP authentication, session management, RBAC, multi-tenant isolation, rate limiting, AES encryption
AI Integration	Google Gemini, Anthropic Claude, Vercel AI SDK, prompt engineering, resume parsing, LLM-assisted candidate matching, retrieval and ranking
Cloud & DevOps	AWS (EC2, S3), Vercel, Docker, Kubernetes, Git, GitHub Actions, CI/CD, Linux
Testing & Tools	Vitest, Playwright, PostHog, GA4, Razorpay

EDUCATION

Bachelor of Science, Information Technology

GLS University, Ahmedabad, India | 2023

CERTIFICATIONS

NASSCOM / NCVET Certification [View Certificate](#)

Ministry of Skill Development & Entrepreneurship, Govt. of India | Apr 2025

Introduction to Artificial Intelligence [View Certificate](#)
